

I object to the imposition of mandatory content protection of DTV reception capabilities for new television sets. As consumer I dislike the control for profit the use of technology to circumvent the free use clause of the copyright laws. I as a consumer believe that I have the right to copy for personal use of all commercial broadcast material without the Hollywood Media Moguls telling me that I can Not!! I has been proven in court multiple times that the consumer has the right under copyright laws to record and use for personal use only any and all Free Broadcasts over the air! This is just another attempt of the movie industry to control the recording of programs provided over the air by commercial broadcasters under the current copyright laws. This is just another way to limit consumers rights to use copyrighted material for personal noncommercial use by the consumer. This same argument came up after the Video Recorder was introduced and the complaint then was they would loose profits. This inclusion content protections it Digital TV is jus another way of not allowing the consumer to continue the use of recording their programs in an attempt to increase their profits under the assumption that consumers will violate current freedom of use under current copyright laws!!!!
